Release Date – 09/30/2021

For questions or feedback, please contact Alex Martinez at alex.martinez@us.panasonic.com

New Functionality		
Feature	Description	Value Delivered
NA		

Enhancements		
Feature	Description	Value Delivered
International date formats	The app supports international date formats in all areas where dates are displayed.	Additional support for international markets
Improved user experience with facility maps	There have been various fixes to facility maps that make for a more intuitive and accurate user experience.	Improves the quality and customer satisfaction.
Restricting support to Android 8.1 and newer	The app will require that Android devices run Android 8.1 or newer. Android 8.1 has been available for over 4 years, so this will be supported in the vast majority of Android devices today.	Makes it easier to support the app.
Changing name to “VI Mobile Plus” and updating app icon to current image.	The new app is called “VI Mobile Plus”. In addition, it now uses the same icon the rest of our VMS products are using.	Brings the Android app in line with the rest of our products from a branding perspective.
Updating contact info and social media links	Links for tech support and social media have been updated to reflect our current company name and website.	Improves user experience when trying to reach tech support.

High Level Defects Resolved

Defect	Description
Timeline not working properly	When moving the timeline, the app would not play recorded video at the selected time. Instead, it would either not play, or it would start playing live video. This has been fixed and the app will now play video at the selected time.
Username and password were passed in the clear	The app was passing the username and password in clear text to the server. The username and password are now passed encrypted to the server.
